

NISITH MOHANTY

Senior Frontend Engineer — React.js — Angular — TypeScript — Performance Optimization

Bengaluru, India

mohantynisith116@gmail.com — +91 9769360059 — [linkedin.com/in/nisith-mohanty-6210bb123](https://www.linkedin.com/in/nisith-mohanty-6210bb123)

Summary

Senior Frontend Engineer with 9+ years of experience building scalable, secure, and high-performance enterprise web applications using React.js, Angular, TypeScript, JavaScript, RxJS, NgRx, Redux Toolkit, Zustand, TanStack Query, HTML5, SCSS, Tailwind CSS, and REST APIs. Experienced in developing production-grade React and Angular modules, reusable UI components, secure frontend flows, performance-optimized data-heavy screens, and responsive enterprise applications. Proven record of improving page load time by approximately 15%, improving UI responsiveness by approximately 20%, reducing redundant API calls by approximately 20%, reducing duplicate frontend code by approximately 25%, improving website performance by 25%, and increasing test coverage to 92%. Experienced in using AI-assisted development tools such as GitHub Copilot, ChatGPT, Claude, Gemini, Cline, and MCP-based workflows to improve productivity, debugging, documentation, and test-case generation.

Technical Skills

Languages: TypeScript, JavaScript, ES6+, HTML5, CSS3, SCSS

Frontend: React.js, Angular, React Hooks, Angular Reactive Forms, Component-Based Architecture, Responsive Web Design

State Management: RxJS, NgRx, Redux Toolkit, Redux, Zustand, TanStack Query

UI and Styling: PrimeNG, AG Grid, Angular Material, Tailwind CSS, Moment.js, Lodash

Build Tools: Vite, Angular CLI, npm, Webpack

API and Security: REST APIs, JSON, Spring Boot API Integration, HTTP Interceptors, JWT, RBAC, Route Guards, Secure Cookies, Enterprise Session Management

Performance: Lazy Loading, Code Splitting, Tree Shaking, Image Compression, Asset Optimization, Caching, Bundle Optimization, Pagination, Virtual Scrolling, Memoization, Debouncing, Throttling, OnPush Change Detection, trackBy, Lighthouse

Testing and Tools: Jasmine, Karma, Jest, Unit Testing, Integration Testing, TDD, Git, Jira, Agile/Scrum, Code Reviews, Defect Triage, Release Validation, Production Support

AI-Assisted Development: GitHub Copilot, ChatGPT, Claude, Anthropic, Gemini, Cline, MCP, AI-assisted coding, prompt engineering, code generation, debugging, refactoring, documentation, test-case generation, code review assistance

Professional Experience

Visa — Senior Software Engineer

Jul 2022 – Present

Bengaluru, Karnataka, India **Project:** VAS Sales Navigator / Visa Value Calculator

Enterprise sales enablement and value-based financial selling platform built to help Visa client-facing teams identify client-specific Value Added Services, analyze business problems, and generate ROI-driven insights for early-stage deal conversations.

- Developed production-grade frontend modules using React.js, Angular, TypeScript, JavaScript, RxJS, Redux Toolkit, HTML5, SCSS, Tailwind CSS, and REST API integration.
- Built production React.js modules using functional components, React Hooks, Redux Toolkit, Zustand, TanStack Query, custom hooks, reusable component patterns, controlled forms, and API-driven UI rendering.
- Optimized React application performance using React.memo, useMemo, useCallback, Vite-based build optimization, code splitting, lazy loading, and efficient state management with Redux Toolkit and Zustand.
- Developed scalable Angular modules using RxJS, reactive forms, services, routing, lazy loading, OnPush change detection, trackBy, HTTP interceptors, and component-based architecture.
- Used AI-assisted development tools including GitHub Copilot, ChatGPT, Claude, Gemini, Cline, and MCP-based workflows to accelerate frontend development, improve debugging efficiency, generate test scenarios, refactor reusable components, and create technical documentation.
- Applied prompt engineering and AI-assisted code review techniques to validate implementation approaches, identify edge cases, improve code readability, and support faster delivery of Angular and React features.
- Improved application page load time by approximately 15% through Angular lazy loading, React code splitting, image compression, asset optimization, tree shaking, bundle-size reduction, caching, and optimized API consumption.
- Improved UI responsiveness on data-heavy recommendation screens by approximately 20% using pagination, virtual scrolling, optimized filtering, memoization, React.memo, useMemo, useCallback, trackBy, OnPush change detection, debouncing, throttling, and reduced DOM re-rendering.
- Reduced redundant API calls by approximately 20% through optimized RxJS streams, request caching, reusable data services, conditional API loading, HTTP interceptors, TanStack Query caching, and improved component lifecycle handling.

- Reduced duplicate frontend code by approximately 25% by creating reusable Angular/React components, shared services, custom hooks, common utilities, form validators, and standardized UI patterns.
- Built scalable and extensible UI components for product recommendations, value calculator journeys, regional filtering, client problem selection, product eligibility, sales play alignment, and recommendation ranking.
- Implemented secure frontend flows using JWT, RBAC, route guards, HTTP interceptors, secure cookies, protected routes, and enterprise session management.
- Integrated frontend modules with Spring Boot REST APIs and enterprise datasets including product, client, and finance data.
- Improved release quality through code reviews, defect triage, unit testing with Jest, Jasmine, and Karma, integration testing, release validation, and production support.
- Collaborated with product, UX, backend, QA, and regional sales teams across multiple geographies in Agile/Scrum to deliver responsive, accessible, and maintainable enterprise UI solutions.

Operative — Senior Frontend Developer

Jan 2020 – Jul 2022

Bengaluru, Karnataka, India **Projects: Ratecard, Product Chooser**

- Implemented performance tuning techniques including build package size reduction, dataset caching, and NgRx store, increasing website performance by 25%.
- Designed, implemented, hosted, and integrated a reusable UI library into the Ratecard project.
- Resolved 275+ tickets across enhancements, client issues, debugging, maintenance, and production support.
- Followed Test-Driven Development using Karma and Jasmine, increasing code coverage to 92%.
- Worked extensively with PrimeNG, AG Grid, Moment.js, and Lodash to enhance project functionality.
- Trained and mentored 4 developers on frontend fundamentals through regular UI sessions.

Infrd — Frontend Developer

Aug 2019 – Jan 2020

Bengaluru, Karnataka, India

- Translated product requirements and business objectives into polished, responsive user interfaces in collaboration with product managers and UX designers.
- Reviewed code to validate structure, security, browser compatibility, device compatibility, and operating system compatibility.

Zycus — Software Engineer

Oct 2018 – Aug 2019

Mumbai, Maharashtra, India

- Enhanced legacy applications by building reusable frontend components using Angular and TypeScript.
- Developed dynamic form components and template-based UI workflows for procurement source-to-pay software solutions.

Tata Consultancy Services — System Engineer

Nov 2016 – Oct 2018

Mumbai, Maharashtra, India

- Developed Angular-based admin modules and integrated frontend screens with APIs and JSON-based web services.
- Supported production issue resolution, testing, implementation, and client/end-user communication for payment application modules.

Education

Bachelor of Technology, Electrical Engineering — College of Engineering and Technology, Bhubaneswar 2012 – 2016

Key Achievements

- Improved page load time by approximately 15% through lazy loading, code splitting, image compression, caching, bundle optimization, and optimized API consumption.
- Improved UI responsiveness by approximately 20% on data-heavy screens using pagination, virtual scrolling, memoization, debouncing, throttling, and optimized rendering.
- Reduced redundant API calls by approximately 20% using RxJS optimization, TanStack Query caching, request caching, conditional API loading, and reusable data services.
- Reduced duplicate frontend code by approximately 25% through reusable Angular/React components, custom hooks, shared utilities, validators, and standardized UI patterns.
- Used AI-assisted tools such as GitHub Copilot, ChatGPT, Claude, Gemini, Cline, and MCP-based workflows to improve frontend productivity, debugging, documentation, refactoring, and test-case generation.
- Improved website performance by 25% at Operative, increased test coverage to 92%, resolved 275+ tickets, delivered 4 major enhancements, and mentored 4 frontend developers.
